

# Greek Life

Model the Fraternity/Sorority system in a series of database tables.

Here's what we know about frats and sororities:

Name	Type	Motto	Year Founded
Chi Phi	Frat	Truth, honesty and personal integrity	1824
Alpha Delta Pi	Sorority	We live for each other	1851
Phi Sigma Sigma	Sorority	Aim high	1913
Zeta Tau Alpha	Frat	Seek the noblest	1898
Alpha Psi Omega	Frat	Seek a life useful	1925
Phi Delta Chi	Mixed	Each needs the help of the other	1883

A college may sponsor multiple Greek organizations; similarly a Greek organization may have branches at multiple colleges.

However a person can only pledge to one Greek organization.

Build an Access database with tables for –

- Organizations – to hold the 3 Greek organizations you have chosen;
- Members – name, role (e.g. President, Secretary...), and date pledged;
- Colleges – name, city, state;
- and any linking tables you might need.

Include **3** Greek organizations, **2** colleges, and **10** members.

The database will not be designed correctly unless all tables are built, and the relationships show the one (1) or many ( $\infty$ ) symbol.
