

To make a web site on webs.com

1. Go to <http://www.webs.com>
2. Type in your email address and a password. In the drop down, choose Personal
3. Click the Get Started button
4. Use the wizard to
 - a. Give your site a Site Title and a Site Category
 - b. Select a Theme
 - c. Decide which pages you would like on your site
 - d. Enter the Security Code, read and agree to the Terms of Service if you are comfortable with them
 - e. Click Create My Website
5. Pick a domain for the website. You can use your name or anything unique.
6. Click Create My Website
7. You can take a tour of Site Builder if you like
8. You will be placed in the Site Builder interface. From here, you will have to create an HTML module
 - a. On the very bottom of the Site Builder window, click the Other tab
 - b. Then you should see the Custom HTML widget, which you can drag to an open area on your web page.
9. Double click to add HTML. Note webs.com does not let you create complete HTML pages and upload them. However, any HTML that you would include in the <body> tags you can include on this site. For instance, you could add <h1>, , , <dl>, <dt>, <a>, <p>, <table> tags to your page.
10. Save the changes
11. Then click the Publish button in the upper left hand corner of the window.
12. You will, at some point, be asked to verify your email address. You should be sent a link that will let webs.com know that you correctly identified yourself.
13. You can always re-log in using the address in step 1 to make subsequent edits.

For an example, see <http://jackFmyers.webs.com>
