In Class Exercise for Elasticsearch

1. Create a json file for your website post similar to myersjac_post.json. You can add extra fields if you would like.

2. Use the curl command to post it into the **website** index.

3. Use the curl command to query the document with your last name.

4. Now that you have the document's id, retrieve it with full metadata. Note the version number.

5. Update your JSON in some way. Repost it, but make sure you use the document id.

6. Reretrieve your document. Note the version number.

7. Make a second website post, then delete the second one. Verify that it is gone.
